

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1 - 35. (canceled)

Claim 36. (Previously Presented): Digital photo processing system comprising:

at least one wireless digital camera apparatus, wherein each said apparatus includes a processor, a memory, and a destination address and one or more previously defined recipient codes stored in said memory; user interface connected to said processor for at least displaying one or more said recipient codes and receiving signals indicating user selection of a displayed recipient code; a digital camera connected to said processor for capturing one or more digital images in response to signals from said user interface; a RF communications device connected to said processor; and processor control means, responsive to signals received from said user interface, for transmitting a message, including at least said selected recipient code and one said digital image, to said destination address via said RF communications device; and a server associated with said destination address and responsive to messages received at said destination address from each said wireless digital camera apparatus; server memory storing account configuration data including recipient code data; server communications means; and server control means for parsing said recipient code from each said message and processing each said message according to said account configuration data associated with said recipient code, and for transmitting account configuration data including at least one recipient code to at least one said wireless digital camera apparatus; and wherein said processor control means of each said wireless digital camera apparatus is responsive to receiving account configuration data transmitted from said server to update said memory of said wireless digital camera apparatus with at least a portion of said account configuration data.

Claims 37 - 61. (canceled)

Claim 62. (Previously Presented): Digital photo processing system comprising:
at least one wireless digital camera apparatus, wherein each said apparatus includes a processor, a memory, and a destination address and one or more previously defined recipient codes stored in said memory; user interface connected to said processor for at least displaying one or more said recipient codes and receiving signals indicating user selection of a displayed recipient code; a digital camera connected to said processor for capturing one or more digital images in response to signals from said user interface; a RF communications device connected to said processor; and processor control means, responsive to signals received from said user interface, for transmitting a message, including at least said selected recipient code and one said digital image, to said destination address via said RF communications device; and
a server associated with said destination address and responsive to messages received at said destination address from each said wireless digital camera apparatus; a database storing account configuration data including recipient code data; a server communication device; and server control means for parsing said recipient code from each said message, retrieving from said database account configuration data that is associated with said recipient code, and processing each said message according to said account configuration data.

Claims 63 - 74. (canceled)

Claim 75. (Presently amended): Digital photo processing system of Claim 62, wherein said server control means processing of said message further comprises archiving at least a portion of said message on said server.

Claim 76. (Presently amended): Digital photo processing system of Claim 62, wherein said server control means processing of said message further comprises distributing at least a portion of said message to one or more

recipient addresses associated with said recipient code in said account configuration data.

Claim 77. (Presently amended): Digital photo processing system of Claim 62, wherein said message further comprises an account identifier, said database configuration data further includes an account identifier, and said server control means is for parsing said recipient code and said account identifier from each said message, retrieving from said database account configuration data that is associated with both said account identifier and said recipient code, and processing each said message according to said account configuration data.

Claim 78. (New): Digital photo processing system of Claim 62, wherein said server control means processing of said message further comprises sending instructions for accessing said digital image to one or more recipient addresses associated with said recipient code in said account configuration data.

Claim 79. (New): Digital photo processing system of Claim 62, wherein said user interface further comprises means for creating a digital audio recording, and said message further includes said digital audio recording.

Claim 80. (New): Digital photo processing system of Claim 79, wherein said server control means processing of said message further comprises distributing said digital audio recording to one or more recipient addresses associated with said recipient code in said account configuration data.

Claim 81. (New): Digital photo processing system of Claim 79, wherein said server control means processing of said message further comprises distributing said digital audio recording to one or more recipient phone numbers associated with said recipient code in said account configuration data.

Claim 82. (New): Digital photo processing system of Claim 62, wherein said server control means processing of said message further comprises distributing said message to a printing service associated with said recipient code in said account configuration data.

- Claim 83. (New): Digital photo processing system of Claim 36, wherein said server control means processing of said message further comprises archiving at least a portion of said message on said server.
- Claim 84. (New): Digital photo processing system of Claim 36, wherein said server control means processing of said message further comprises distributing at least a portion of said message to one or more recipient addresses associated with said recipient code in said account configuration data.
- Claim 85. (New): Digital photo processing system of Claim 36, wherein said message further comprises an account identifier, said server account configuration data further including account identifier data, and said server control means processing is according to account configuration data that is associated with both said account identifier and said recipient code.
- Claim 86. (New): Digital photo processing system of Claim 36, wherein said server control means processing of said message further comprises sending instructions for accessing said digital image to one or more recipient addresses associated with said recipient code in said account configuration data.
- Claim 87. (New): Digital photo processing system of Claim 36, wherein said user interface further comprises means for creating a digital audio recording, and said message further includes said digital audio recording.
- Claim 88. (New): Digital photo processing system of Claim 87, wherein said server control means processing of said message further comprises distributing said digital audio recording to one or more recipient addresses associated with said recipient code in said account configuration data.
- Claim 89. (New): Digital photo processing system of Claim 87, wherein said server control means processing of said message further comprises distributing said digital audio recording to one or more recipient phone numbers associated with said recipient code in said account configuration data.

Claim 90. (New): Digital photo processing system of Claim 36, wherein said server control means processing of said message further comprises distributing said message to a printing service associated with said recipient code in said account configuration data.
